WIRING – RS-485

WIRING – DC IN

Notes:

Both ends of the RS-485 network should be terminated with a 100ohm, 1/4W, 1% resistor. Many OCS controllers feature dip switches or jumpers which enable appropriate termination if the OCS is located on a network end.

Init Default Setup:

1. Install jumper between INIT and GND terminals of the RS-485 port.
2. Apply power to Smartmod unit.
3. Read parameter words to see current parameters.
4. Write changes if necessary.

The INIT Default RS485 Settings Are:

Modbus ID = 1
 Baud rate = 9600
 Parity = None
 Stop Bits = 1

3 CONFIGURATION DATA

SmartMod Configuration settings are mapped into Modbus Register space. This configuration data may be modified with any Modbus/RTU Master device. For convenience, Horner APG has developed a variety of Cscape application files which allow an OCS (XLe, NX, LX, QX) to act as a SmartMod configurator. Initial configuration of SmartMod module should be done on an individual basis, since all modules come from the factory with a default Modbus ID of 1. Once each module on the network has its own unique Modbus ID, further configuration adjustments can be made with the entire network powered.

All configuration parameters are stored in EPROM. That means they should not be constantly rewritten.

4 INPUT / OUTPUT DATA

SmartMod Digital I/O data utilizes both Modbus Registers (40009-40011) and Coils (1-35). It is possible to access all data using Registers only, because the Coils data can be accessed through Registers.

The following tables lists all Modbus I/O data available.

I/O Register Data (Registers 40009-40011)							
Modbus Register	Description	Access	Bits 4-15	Bit 3	Bit 2	Bit 1	Bit 0
40009	Mirror of Input Coil Data	Read-only	unused	In 3	In 2	In 1	In 0
40010	Mirror of Output Data	Read/Write	unused	Out 3	Out 2	Out 1	Out 0
40011	Mirror of WatchDog Data	Read/Write	unused		PwrUp Event	W.D.* Event	W.D.* Enbl'd

*W.D. = Watchdog

Modbus Coil	Description	Access
00001	Input 0	Read-only
00002	Input 1	Read-only
00003	Input 2	Read-only
00004	Input 3	Read-only
0005-00016	Reserved	
00017	Output 0	Read/Write
00018	Output 1	Read/Write
00019	Output 2	Read/Write
00020	Output 3	Read/Write
00021-00032	Reserved	
00033	Watchdog Enabled	Read/Write
00034	Watchdog Event	Read/Write
00035	Power-up Event	Read/Write

Watchdog Event & Power-up Event Operation

If Coil 33 (Watchdog Enabled) is set, Coil 34 (Watchdog Event) will set if the Watchdog Timeout value is exceeded. The Watchdog Timeout value is set in Register 40013. When set, Coil 34 can be reset by the controller when normal communications resumes.

The Power-up Event (Coil 35) is set every time the power is applied. It can be cleared by the controller if desired.

5 INSTALLATION / SAFETY

Warning: Remove power from the OCS controller, CAN port, and any peripheral equipment connected to this local system before adding or replacing this or any module.

- a. All applicable codes and standards should be followed in the installation of this product.
- b. Shielded, twisted-pair wiring should be used for best performance.
- c. Shields may be terminated at the module terminal strip.
- d. In severe applications, shields should be tied directly to the ground block within the panel.
- e. Use the following wire type or equivalent: Belden 8441.

For detailed installation and a handy checklist that covers panel box layout requirements and minimum clearances, refer to the hardware manual of the controller you are using. (See the **Additional References** section in this document.)

When found on the product, the following symbols specify:

Warning: Consult user documentation.
